

ALEX T. LARWEH

AI Engineer | Backend Developer | Agentic Systems & Automation

Accra, Ghana | +233 540 286 280 | lexlar2017@gmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

AI Automation Engineer and backend-focused Software Developer with 5+ years of code-heavy experience across full-stack development, backend systems, APIs, databases, and production workflow automation. Currently building AI-powered backend systems using Python, FastAPI, n8n, OpenAI APIs, PostgreSQL, Supabase, RAG, and vector-based retrieval. Experienced in designing multi-step automation workflows, integrating LLM APIs, debugging logs and workflow failures, building API-driven systems, and translating business needs into reliable AI-powered products.

CORE SKILLS

AI Engineering	OpenAI API, LLM integration, AI agents, RAG pipelines, embeddings, prompt engineering
Backend	Python, FastAPI, REST APIs, PHP/Laravel, API integrations, backend services, async workflow patterns
Automation	n8n, AI workflow automation, email automation, WhatsApp automation, business process automation
Data	PostgreSQL, Supabase, MySQL, vector storage, retrieval workflows, SQL fundamentals
Agentic Systems	multi-step workflows, agent memory/state concepts, tool/function calling concepts, RAG assistants
Familiar	Anthropic, Hugging Face, LangChain, LangGraph, MCP, CI/CD, web scraping, PDF/document parsing concepts
AI Dev Tools	Claude Code for production development/debugging, AI-assisted coding workflows, code review support
Engineering Tools	Git, GitHub, Docker, Unix/Linux, CLI workflows, logging, debugging, documentation

PROFESSIONAL EXPERIENCE

AI Automation Engineer | Kioobi SRL, Italy | January 2026 - Present

- Build backend AI automation systems using Python, FastAPI, n8n, OpenAI APIs, PostgreSQL, and Supabase.
- Design multi-step automation workflows that connect business processes, customer interactions, APIs, databases, and backend services.
- Integrate LLM-powered features into practical workflows, including AI response generation, routing logic, and contextual automation.
- Use Supabase and vector-based retrieval patterns to support contextual responses in RAG-style systems.
- Debug AI automation behavior by inspecting logs, workflow execution, API responses, failed steps, and data flow.
- Improve reliability and maintainability through structured testing, documentation, and production-focused workflow design.
- Use Claude Code as part of production development and debugging workflows to inspect code and improve implementation quality.
- Explore agentic engineering practices, including tool calling concepts, agent memory/state patterns, and LangChain/LangGraph.

Project Lead / Web Developer | Enokay69.com, Accra, Ghana | November 2022 - December 2025

- Led full-stack web development projects from requirements gathering through delivery, maintenance, and support.
- Built and maintained Laravel applications using PHP, JavaScript, Bootstrap, HTML, CSS, and MySQL.
- Designed backend logic, database structures, and API integrations to support business workflows and web platforms.
- Integrated third-party services and APIs to improve application functionality and operational processes.
- Used Git for version control and collaborated with developers, security specialists, and stakeholders.
- Applied security, debugging, analytics, and performance practices to improve application reliability and user experience.

IT Support Analyst | Betika Ghana, Accra, Ghana | September 2020 - July 2024

- Provided first-line technical support for hardware, software, network, and business application issues.
- Diagnosed and resolved technical problems by analyzing symptoms, reproducing issues, reviewing system behavior, and escalating where required.

- Supported and troubleshoot systems including Zendesk, FreePBX/Asterisk PBX, and NComputing.
- Logged incidents, maintained documentation, and communicated clearly with non-technical users during resolution.
- Built practical experience in structured troubleshooting, technical communication, system reliability, and operational support.

Frontend Developer / Graphic and Product Designer | GoDropping Ghana Ltd, Accra, Ghana | 2019 - 2020

- Designed landing pages and email templates using HTML, CSS, and JavaScript.
- Identified UI/UX issues in company mobile and web applications, including responsiveness, speed, and usability problems.
- Manually tested websites and apps, documented findings, and prepared reports for the development team.

SELECTED AI AND SOFTWARE PROJECTS

Production AI Email Support System

- Built and deployed an AI email support system with FastAPI as the backend logic layer and n8n for workflow orchestration.
- Integrated OpenAI API processing, workflow routing, backend validation, and business-specific response logic.
- Designed the system to reduce manual response work, improve support consistency, and make email handling more scalable.
- Validated system behavior through backend review, workflow checks, log inspection, and production deployment testing.

AI WhatsApp Receptionist

- Building an AI-powered WhatsApp assistant for customer inquiries and business workflow automation.
- Uses RAG-style contextual response patterns with Supabase/vector storage for retrieval.
- Designed around automated replies, customer-service workflows, payment-processing plans, and operational automation.
- Focuses on agent-like conversation flow, business-specific memory/context, and reliable workflow action.

Client Web Development and Business Systems

- Built and supported WordPress websites for international clients in the UK, Germany, and Portugal.
- Delivered privacy-focused contact systems, Stripe and Calendly integrations, custom HTML/CSS, and CMS content management.
- Built Enokay69.com using Laravel and Bootstrap and Levotude.com using WordPress with custom HTML/CSS.

EDUCATION AND LEARNING

Bachelor of Science in Computer Science | Ghana Communication Technology University (GCTU), Accra, Ghana

Full Stack Generative and Agentic AI with Python | Agentic AI Engineering | AI Automation with APIs and n8n | n8n Workflow Automation
